PROFESSIONAL SUMMARY

.NET Full Stack Developer with extensive experience in designing, developing, and deploying robust, scalable web applications. Proficient in utilizing the latest .NET technologies, frameworks, and tools, with a deep understanding of both front-end and back-end development. Adept at working with ASP.NET, C#, MVC, RESTful APIs, SQL Server, and JavaScript frameworks such as React and Angular. Passionate about delivering clean, efficient code and leveraging modern development practices to build dynamic user interfaces.

SKILLS

Programming Languages: C#, VB.NET, SQL, JavaScript, jQuery, TypeScript

Web Development Frameworks: ASP.NET Core, ASP.NET MVC, Web API, Blazor

Front-End Technologies: React, Angular, HTML5, CSS3

Database Management: SQL Server, NHibernate, Ado.NET, Entity Framework, LINQ

Version Control & CI/CD: Git, GitHub, Bitbucket, Azure DevOps, Gitlab

Tools & IDEs: Visual Studio, Visual Studio Code, Postman, SSMS, IIS, Cassandra

Testing & Debugging: NUnit, Unit Testing, Integration Testing

Software Design & Methodologies: MVC, Microservices, RESTful APIs, Agile/Scrum, SOLID Principles

Cloud: Azure Functions, Azure Bus, Azure Blobs

EXPERIENCE

Excelicare

Engineer

Bengaluru

Sep 2024 – Present

Excelicare

- Designed and implemented a dynamic UI filter for the **Patients Task List** page and **Patient Home** pages, enabling healthcare professionals to quickly filter and access patient-specific tasks and information, improving workflow efficiency.
- Identified and **resolved critical bugs** in the application, resulting in smoother interactions and an improved overall User Experience (UX).
- Integrated **CI/CD pipelines using Azure Pipelines within Azure DevOps** to automate the deployment process, ensuring seamless and reliable updates to the healthcare application.
- Developed and executed unit tests using **NUnit** to ensure the stability and functionality of key features, increasing the code's maintainability and reducing the likelihood of future issues.
- Collaborated closely with the **product client, database team, and QA team** to gather requirements, validate features, and address issues in a timely manner, ensuring alignment with business needs and project timelines.
- Suggested and implemented new development techniques and best practices that streamlined the development process and improved application performance.
- Introduced improvements to **coding standards, optimized workflows, and recommended tools** that enhanced both development speed and the long-term maintainability of the healthcare application.

Progence Technologies

Junior Program Analyst

Hyderabad

Nov 2022 – Sep 2024

LIMS plus v5

- Designed, developed, and maintained web applications for the forensic domain, focusing on case management, procedures, and evidence tracking.
- Implemented and maintained SOPs** (Standard Operating Procedures) for handling evidence and requests tied to cases, ensuring enhanced security and user-specific access control.
- Incorporated **role-based security measures to control evidence access** based on user authorization, ensuring compliance with security standards for sensitive data.
- Resolved **integration issues related to GD Picture** with enabling and disabling annotations while saving and printing attachments, ensuring reliable image handling within forensic cases.
- Leveraged **Azure DevOps for managing and automating the deployment process**, ensuring reliability and consistency across environments

- Developed and maintained front-end features for the forensic application and lab/chemical systems, ensuring a seamless user experience for non-technical users.
- Implemented global lookup screens for Evidence, Requests and other pages for **easy navigation and effective user experience**.
- Developed **multiple API endpoints using CSLA framework and LLBL Gen Pro ORM** to fetch case-related details, enhancing integration with third-party applications.
- **Modified and optimized stored procedures for better data retrieval performance** and reduced latency, ensuring faster query processing for large datasets in forensic and lab systems.

CIMS

- **Led a small project team for 3 months**, successfully delivering key features within a lab management web application, including chemical and procedure management modules.
- Identified and resolved critical bugs across various modules of the application, improving overall functionality and ensuring a seamless and **efficient user experience**.
- Implemented the "**Unlimited Specification**" functionality in the Raw Materials module, addressing a specific client need for managing chemicals in preparation processes, **ensuring high-quality data management and accuracy**.
- Gathered and translated client requirements into technical specifications, **effectively customizing the lab management system** to meet unique operational needs.
- **Proactively resolved client issues with a positive and solution-oriented attitude, building strong client trust and satisfaction**.
- Played an instrumental role in the **iterative improvement of the application**, ensuring long-term system sustainability and alignment with evolving client needs.
- Conducted thorough testing and debugging to ensure system stability, which resulted in **enhanced performance**.

EDUCATION

Sri Krishna Devaraya University

M. Sc

Aug 2021 - Nov 2022
