PROFESSIONAL SUMMARY

.NET Full Stack Developer with extensive experience in designing, developing, and deploying robust, scalable web applications. Proficient in utilizing the latest .NET technologies, frameworks, and tools, with a deep understanding of both front-end and back-end development. Adept at working with ASP.NET, C#, MVC, RESTful APIs, SQL, and JavaScript frameworks such as React and Angular. Passionate about delivering clean, efficient code and leveraging modern development practices to build dynamic user interfaces.

SKILLS

Programming Languages: C#, VB.NET, SQL, JavaScript, jQuery, TypeScript

Web Development Frameworks: ASP.NET Core, ASP.NET MVC, Web API

Front-End Technologies: React, Angular, HTML5, CSS3, Bootstrap

Database Management: SQL Server, NHibernate, ADO.NET, Entity Framework, LINQ

Version Control & CI/CD: Git, GitHub, Bitbucket, Azure DevOps, Gitlab

Tools & IDEs: Visual Studio, SQL Server, Cosmos DB, PostgreSQL, VS Code, Postman

Testing & Debugging: NUnit, Unit Testing, Integration Testing

Software Design & Methodologies: MVC, Microservices, RESTful APIs, Agile/Scrum, SOLID Principles

Cloud: Azure Functions, Azure Bus, Azure Blobs

Others: MSMQ, Kafka, Docker, RabbitMQ

EXPERIENCE

Sutherland Healthcare Solutions

Hyderabad

Sr Assoc Software Engineer

Jun 2025 – Present

Project: SMC (Smart Med Coding)

- Designed, developed, and maintained modules within the ASP.NET MVC web application for the Smart Med Coding system.
- Integrated a chatbot interface** to assist users in navigating the system, retrieving coding information, and automating medical code lookups.
- Implemented **RESTful API** connections between the chatbot and backend logic for real-time data retrieval.
- Enhanced user experience (UX)** by embedding intelligent assistance features and conversational UI.
- Participated in **database design and optimization for efficient storage** and retrieval of medical coding data.
- Refactored and optimized the existing codebase**, improving maintainability, performance, and adherence to clean coding standards (SOLID principles, MVC best practices).
- Performed comprehensive code reviews** to identify inefficiencies, enforce consistency, and enhance application scalability.

Excelicare

Hyderabad

Engineer

Sep 2024 – Jun 2025

Project: Excelicare

- Designed and implemented SQL Server stored procedures, functions, and views to drive dynamic data filtering for the Patients Task List and Patient Home pages, enhancing data retrieval efficiency.
- Identified and **resolved critical bugs** in the application, resulting in smoother interactions and an improved overall User Experience (UX).
- Debugged and optimized complex T-SQL queries to improve system performance and reduce response times for critical healthcare workflows.
- Developed and executed unit tests using **NUnit** to ensure the stability and functionality of key features, increasing the code's maintainability and reducing the likelihood of future issues.
- Developed backend services in .NET to interface with the SQL Server database, improving reliability and maintainability of healthcare modules.
- Introduced performance tuning techniques such as indexing, query refactoring, and execution plan analysis to reduce database latency.
- Introduced improvements to **coding standards, optimized workflows, and recommended tools** that enhanced both development speed and the long-term maintainability of the healthcare application.

Project: LIMS plus v5

- Designed and maintained SQL Server stored procedures and functions to support forensic domain workflows, including evidence tracking and case management.
- **Implemented and maintained SOPs** (Standard Operating Procedures) for handling evidence and requests tied to cases, ensuring enhanced security and user-specific access control.
- Incorporated **role-based security measures to control evidence access** based on user authorization, ensuring compliance with security standards for sensitive data.
- Created and managed lookup tables and reference data models in SQL Server for efficient filtering and reporting across forensic systems.
- Worked on backend services in .NET to retrieve and persist data using LLBL Gen Pro ORM, ensuring optimal interaction with the database layer.
- Optimized high-traffic queries and stored procedures, resulting in significant performance improvements for end-users in lab and forensic environments.

Project: CIMS

- Developed advanced stored procedures and SQL logic to implement complex business rules, including the "Unlimited Specification" feature for raw materials.
- Proactively analyzed slow-performing queries and implemented indexing and normalization strategies to enhance database performance.
- Gathered and translated client requirements into technical specifications, **effectively customizing the lab management system** to meet unique operational needs.
- **Proactively resolved client issues with a positive and solution-oriented attitude, building strong client trust and satisfaction.**
- Collaborated with QA for SQL unit testing and validation of data integrity during iterative development cycles.
- Contributed to backend API development in .NET for chemical management features, tightly integrated with SQL Server.

EDUCATION

Sri Krishnadevaraya University
M. Sc

Aug 2021 - Nov 2022

Sri Krishnadevaraya University
B. Sc

Sep 2017- Jun 2021
